

BONUS TIPS

Be Winter Ready

1. Humidifier Health Check:

Filter Check:

Swap out that old filter like its last year's hockey season – nobody wants moldy air in their home!

Humidistat Test:

Make sure your humidistat kicks in when the heat does. A comfy home is a happy home!

Clear the Hose:

Dirty humidifier hose? That's a no-go! Keep it squeaky clean so your humidifier can do its thing.

Damper Drama:

Open sesame! Your humidifier damper should be set to 'winter mode' – trust us, it's the winter position's time to shine.

Filter Pad Drip Test:

Is water flowing down the filter pad? If not, your humidifier might need a little touch up.

2. CO Detector Check:

Battery Refresh:

Change those batteries before they take a winter nap on you.

Not Expired, Right?:

Double-check that expiration date! CO detectors don't last forever.

Read the Manual:

Manufacturers know best. A quick skim might save you in the long run!

Function Test:

If it's not beeping when it should, it's time for a replacement.

3. Insulate for Comfort:

Draft-Proof your home:

Check if your windows and doors are tightly shut and no drafts are entering your house. If you find any leaks or gaps, use chalk or expanding foam to seal off those openings.

Why Wait? Let's Get It Done!

Schedule your service checkup today and keep the comfort rolling all winter long!

Ready to get Cozy?

This Winter, stay warm, hydrated and moisturized.

Stay warm and hydrated,
